The reliability analysis of the slopes near the Shuidonggou landslide

| Strength parameters in nature | | | |
|-------------------------------|--------------------------|---------|------------|
| layer | Index | c (kPa) | ϕ (°) |
| Q ₃ loess | count | 90 | 90 |
| | max | 153.3 | 35.4 |
| | min | 0.84 | 2.1 |
| | average | 44.59 | 24.65 |
| | Standard Deviation | 27.49 | 6.84 |
| | coefficient of variation | 0.62 | 0.28 |
| Q ₂ loess | count | 130 | 130 |
| | max | 137.7 | 38.7 |
| | min | 0.6 | 3.7 |
| | average | 46.06 | 26 |
| | Standard Deviation | 25.44 | 5.68 |
| | coefficient of variation | 0.55 | 0.22 |

CHANG'AN UNIVERSITY

5 Conclusion

The reliability analysis of the slopes near the Shuidonggou landslide

- The **slopes** are **in danger** with a great probability of failure, it can fail at any time and the local residents should **relocate** as soon as possible.
- There are only **a little difference** between the results of the three reliability methods (Monte-Carlo method, The checking point method, Rosenblueth method).
