Announcement

The Institute for Chemical Research (ICR), Kyoto University was formally founded in 1926 with the object of conducting fundamental and applied studies in special fields of chemistry. After several minor changes, the ICR was newly reorganized in 1992, and is now composed of nine divisions and two satellite facilities. On the average, each division is composed of three laboratories, the total number of laboratories being thirty including three laboratories provided for guest members of staff. The research covers a wide range of chemistry, i.e., nuclear chemistry and physics, physical chemistry, surface chemistry, solid state chemistry, analytical chemistry, organic and inorganic chemistry, polymer chemistry, bioorganic chemistry, protein and enzyme chemistry, molecular biology and human genome science.

Since 1929, the Institute has published the Bulletin of the Institute for Chemical Research, which has played an important role in publicizing the activities of the Institute. Currently, however, more than three hundred researchers including one hundred seventy graduate students and some forty foreign researchers are engaged in the research fields mentioned above, and over four hundred papers are published every year by the members of ICR in other journals and proceedings. This has brought us to reconsider the role of the Bulletin, which, in its present form, had difficulty in conveying all of such expanded ICR activities. On the occasion of the reorganization of ICR, we thus determined to issue a new Report of ICR (in English Edition) which will concisely describe the essence of ICR activities and will help to exchange mutual information with outside societies.

Thus this is the last issue of the Bulletin, which will be amalgamated in a newly issued Report of ICR. It is my great pleasure of observing the expansion of our research activities, but at the same time I cannot help becoming sentimental to say a farewell to the Bulletin. Thank you very much for your warm support to the Bulletins in the past.
