

His passing cannot be mourned too much. He was a pioneer in the study of wild chimpanzees. Since 1965, he maintained research at Mahale, Tanzania, and accumulated accomplishments unique to his team, rivaling another longtime chimpanzee researcher, Dr. Jane Goodall whose work at Gombe is well known. He published many excellent papers, for example, on patrilineal structure of chimpanzee society, political strategy among males, and scientific documentation of newly discovered cultural behaviors. He was awarded the Leakey Prize and the International Primatological Society Lifetime Achievement Award. In addition, he served as President of the International Primatological Society. These honors tell how highly he was esteemed internationally.

In 2004, he took up a new position as Executive Director of the Japan Monkey Centre (JMC). JMC is the place where Japanese primatology started and serves as a symbol for our discipline. I strongly recommended him as the best person for this position. The JMC hosts the World Primate Zoo and conducts museum activities such as social education, collection and preservation of materials, research, primate conservation, and publication of the international journal, *Primates*. Nishida-san, who had been eager to spread knowledge about primatology, took on his position energetically like a fish in water. Above all, his greatest achievement as Executive Director of the JMC was to enhance its international activities enormously. He advanced the research project for great ape conservation by the Ministry of Environment and set up the executive office of Great Apes Survival Project Japan Committee (GRASP-Japan) in JMC.

His strong mind commands my profoundest admiration and respect. He had to fight against a serious disease but successfully fulfilled his responsibilities as Executive Director of JMC, performed international activities, and continued to write vigorously. He trained many excellent students. I hope that they will collaborate in maintaining the chimpanzee research station at Mahale, and succeed as Nishida-san would have liked by advancing the project dynamically. May he rest in peace.

Tribute to Prof. Toshisada Nishida

Vernon Reynolds

Oxford University, UK/Budongo Conservation Field Station

I first met Prof. Nishida (“Toshi” as we came to know him) on a visit to the Mahale Mountains chimpanzee project which I made in the late 1970s. I met up with my colleague Yuki Sugiyama in Dar es Salaam and we travelled across Tanzania to Kigoma. There we were supposed to meet a boat from the chimp project which would take us down Lake Tanganyika to Mahale. But it turned out that the boat’s outboard motor was broken. We waited a few days during which we met Toshi and spent some time with him, talking about his work and the Mahale chimpanzees. Eventually I made it to the project where I met the team and the chimps. I did not know it, but I was quite seriously ill with hypothyroidism at the time and my lack of energy surprised the Japanese researchers, but they were kind enough to give me a slow and considerate field assistant to accompany me in the forest. I think we only met Toshi once during that trip, but owing to the thyroid problem I don’t remember much about it.

Over the years, at conferences in Japan and elsewhere, I met Toshi again many times and was always impressed by his friendliness and total dedication to the cause of chimpanzees. I read his book on the Mahale chimpanzees, indeed it was given to us at one of those big IPS conferences in Japan.

Another occasion I remember well was in Paris, where a number of chimpanzee project leaders took part in a meeting at UNESCO headquarters to try and create a new category of “World Heritage Species”, with the apes as the first species in that category. We had good discussions in which Toshi took a leading role. He was also good fun to be with in the little restaurants where we stopped during the days in Paris.

Above all he will be remembered for his work on the chimpanzees of the Mahale Mountains, a field site he set up and which continues to thrive at the present time. Only those who have set up a field site know how much work is involved, and Toshi was an indefatigable field worker who set the highest standards for his students. I recall him as a man who had that rare quality of acute observation without which it’s impossible to be an astute fieldworker, and finally as a man who combined a firmness of purpose with a friendly outlook and disposition.

We at Budongo are all sorry to lose him, and send our condolences to his family.

Reminiscences of Our Student Days

Kosei Izawa

Professor Emeritus, Miyagi University of Education, Japan

For seven years (1961–1968), after I was admitted to the Department of Zoology, Faculty of Science, Kyoto University, until I completed my doctoral course, Nishida-san and I were together in the same lab, as if we had eaten out of the same pot all the time. During that period,
