

SPECIAL CONTRIBUTIONS
OF THE
GEOPHYSICAL INSTITUTE

KYOTO UNIVERSITY

NO. 1

JULY 1963

KYOTO

CONTENTS

Yoshiaki FUKUO: Why is the relative composition of chemical constituents in sea water maintained to be uniform.....	1
Zin'itiro HATSUDA: On the distribution of radioactive elements in granite intrusive bodies	7
Shōitirō HAYAMI: Speculative science of the earth	13
Hideo HIGASHINAKA: On the detection of earth movements by means of the gravity method	17
Haruo HIGUCHI: On the behavior of Chilian Tsunami in the Seto Inland Sea	21
Isamu HIRANO: Melting point in the earth's mantle	31
Tokio ICHINOHE, Ichiro NAKAGAWA and Norihiko SUMITOMO: On secular change of gravity	37
Kyozo KIKKAWA: Effects of the ocean tide transmitted through the confined aquifer	43
Shigetomo KIKUCHI: Observations of volcanic micro-earthquakes at Mt. Aso	55
Yoshimichi KISHIMOTO and Torao TANAKA: On observations of local earth- quakes and crustal deformation at Wakayama	63
Chōro KITSUNEZAKI: High frequency seismic prospecting	73
Akira KUBOTERA: Volcanic micro termor of the second kind—nature of its wave generation and source condition—	81
Hideaki KUNISHI: An experimental study on the generation and growth of wind waves (second paper).....	93
Hiroshi MAEDA: World-wide pattern of ionization drifts in the ionosphere F-region as deduced from geomagnetic variations	99
Shogo MATSUSHIMA: Experimental study of deformation of igneous rocks at high temperature and pressure	105
