Preface

The RIMS workshop “Exact WKB Analysis and Microlocal Analysis” was held at the Research Institute for Mathematical Sciences, Kyoto University from May 26 to May 30, 2008. The aim of this workshop was to overview recent developments of exact WKB analysis and microlocal analysis. The organizers also expected that their interplay might contribute to their further developments.

The present volume is the collection of papers submitted by invited speakers of the above workshop. All papers have been reviewed and are in their final forms. The organizers wish to express their sincere gratitude to all who helped this collection to be published. Our thanks go, especially, to the authors of this volume and to the RIMS staff.

Tatsuya KOIKE
(Organizer in chief)
Kobe University

Contents

1. On the number of the turning points of the second kind of the Noumi-Yamada systems with a large parameter <i>Takashi Aoki, Naofumi Honda and Yoko Umeta</i>	1–30
2. Semiclassical complex interactions at a non-analytic turning point <i>Setsuro Fujiié, Amina Lahmar-Benbernou and André Martinez</i>	31–47
3. On algebraic solutions to Painlevé VI <i>Katsunori Iwasaki</i>	49–67
4. Isolated periodic solutions to Painlevé VI equation <i>Katsunori Iwasaki and Takato Uehara</i>	69–79
5. On the composition of kernel functions of pseudo-differential operators and the compatibility with Leibniz rule <i>Shingo Kamimoto and Kiyoomi Kataoka</i>	81–98
6. On algebraic solutions of $G(3, 2)$ and $G(5/2, 1, 1)$ <i>Hiroyuki Kawamuko</i>	99–111
7. Phase space Feynman path integrals via piecewise bicharacteristic paths and their semiclassical approximations <i>Naoto Kumano-go and Daisuke Fujiwara</i>	113–136
8. Two proofs for the convergence of formal solutions of singular first order nonlinear partial differential equations in complex domain <i>Masatake Miyake and Akira Shirai</i>	137–151
9. A stratified Whitney jet and a tempered-stratified ultradistribution <i>Giovanni Morando and Naofumi Honda</i>	153–161
10. Classification of Fuchsian systems and their connection problem <i>Toshio Oshima</i>	163–192
11. Coupling of two singular partial differential equations and its application <i>Hidetoshi Tahara</i>	193–202

12. Nonlinear partial differential equations and logarithmic singularities	
	<i>Hidetoshi Tahara and Hideshi Yamane</i> 203–209
13. On the role of the degenerate third Painlevé equation of type (D_8) in the exact WKB analysis	
	<i>Yoshitsugu Takei</i> 211–222
14. On generating functions for certain sums of multiple zeta values and a formula of S. Zlobin	
	<i>Noriko Wakabayashi</i> 223–229
15. Gevrey class or ultradistribution solutions to Cauchy and boundary value problems for systems with irregularities	
	<i>Susumu Yamazaki</i> 231–245
16. Asymptotic analysis to Goursat problems	
	<i>Masafumi Yoshino</i> 247–262
