## Preface

This volume is the proceedings of the conference “Algebraic Number Theory and Related Topics 2015” held at RIMS, Kyoto University from November 30 (Mon) through December 4 (Fri), 2015. The conference was held as one of the workshops supported by the joint research program of RIMS, and was intended to cover a wide range of topics in number theory such as algebraic number theory, Iwasawa theory, arithmetic topology, inter-universal Teichmüller theory, arithmetic geometry, algebraic cycles, anabelian geometry, Galois representations and automorphic representations.

Articles in this volume were all written by speakers of the conference and their collaborators, and reviewed by anonymous referees. The articles are classified in the following three categories: Research Articles (usual original research articles), Research Announcements (announcements on results whose details are/will be published elsewhere), and Survey Articles (surveys explaining recent results, backgrounds, ideas and outlines of proofs etc. on specific topics).

We would like to thank all who kindly helped us to organize the conference and to edit these proceedings. In particular, we are grateful to anonymous referees for their kind cooperation, without which the proceedings would have never been completed, the graduate students who helped us during the conference, and all the staff of the joint research office at RIMS for their constant support. Finally we would like to express our sincere gratitude to all who recommended speakers, and to all the speakers of the conference for giving interesting talks and writing articles for this volume. We hope that the articles in this volume will lead to further developments in number theory and related subjects.
