## Preface

This volume is a collection of papers presented at the symposium on mathematical economics sponsored by the Research Institute for Mathematical Sciences, Kyoto University, which was held during November 28 ~ 30, 2003.

On behalf of the programme committee, I would like to extend my cordial thanks to all the participants of the symposium for their sincere and constructive contributions to our project.

We can safely say that mathematical reasonings have been playing a much more indispensable roles in economic theory than in any other discipline of social sciences. There seems to be several reasons which have endowed economic theory with peculiar mathematical characters.

First of all, many economic phenomena permit expressions in terms of quantitative languages.

We have also to take account of the fact that an economy consists of a huge number of sectors which are entangled in a complex manner. Economic phenomena result from the interactions of these interdependent component sectors. Their mutual relation is so complicated that an ordinary language and a casual way of thinking have only very limited abilities to describe and analyze economic phenomena. It is quite easy for anyone to imagine serious confusions which would result if we had recourse exclusively to ordinary languages and casual reasonings. Although mathematical reasonings may sometimes seem too round-about for our purposes, it certainly provides economists with simple and efficient analytical weapons.

Furthermore economists have been suffering from the difficulty of controlled experiments in their researches. That is exactly why much importance has been attached to rigorous speculative experiments in economic theory. So called "axiomatic method" developed in Vienna during the inter-war period should be regarded as being promoted by the same view and recognition under the influence of D. Hilbert.

I would be pleased very much if our symposium could contribute to widening and deepening of the mathematical foundations in economic theory.

目次 (\*speaker)

I. Analytical Foundations of Economic Theory		
1. SYMMETRY AND STABILITY IN DIFFERENTIAL EQUATIONS -----		1
城西大・理	萩原 俊子 (Toshiko Ogiwara)	
東大・数理科学	俣野 博 (Hiroshi Matano) *	
2. Relationships between BC-s.d. $\Omega(f)$ and $(K, \rho)$ -s.d. $\Omega(f)$ in a functional differential equation with infinite delay -----		21
岡山理大・総合情報	濱谷 義弘 (Yoshihiro Hamaya)	
3. Period-Two Trichotomies in Rational Equations -----		34
The American College of Greece	E. Camouzis	
Univ. of Rhode Island	G. Ladas*	
"	E. P. Quinn	
4. Nonparametric Maximum Likelihood Estimation of Probability Measures: Existence and Consistency -----		47
法政大・経済	佐柄 信純 (Nobusumi Sagara)	
II. Aspects of Equilibrium Theory		
5. Indeterminacy of Buying and Selling Price Spread in Monetary Equilibrium without Transactions Costs -----		68
一橋大・経済学	山崎 昭 (Akira Yamazaki)	
6. Real Indeterminacy of Stationary Equilibria in Matching Models with Media of Exchange -----		82
東大・経済学	神谷 和也 (Kazuya Kamiya) *	
一橋大・経済学	清水 崇 (Takashi Shimizu)	
7. Monotone Methods for Equilibrium Selection under Perfect Foresight Dynamics -----		118
東大・経済学	尾山 大輔 (Daisuke Oyama) *	
Harvard Univ.	高橋 悟 (Satoru Takahashi)	
Univ. of Vienna	Josef Hofbauer	
8. Multiple Price Equilibria in a Customer Market -----		119
名大・経済学	皆川 正 (Tadashi Minagawa)	
"	河合 伸 (Shin Kawai) *	

III. Dynamic Macro-economic Theory		
9.	Homoclinic Bifurcation in the Continuous Time Growth Model with Capacity Utilization and External Effects -----	135
	New York Univ.	Jess Benhabib
	京大・経済研	西村 和雄 (Kazuo Nishimura) *
	”	新後閑 禎 (Tadashi Shigoka)
1 0.	A Dynamic Analysis of an Economy with a Zero Interest Rate Bound -----	147
	神戸大・経済学	足立 英之 (Hideyuki Adachi)
	”	中村 保 (Tamotsu Nakamura) *
1 1.	Loanable Funds and Banking Optimization -----	161
	神戸大・経済学	三宅 教史 (Atsushi Miyake)
1 2.	Robustness of Rational Expectations in Dynamic General Equilibrium Model -----	176
	慶應大・経済学	加藤 寛之 (Hiroyuki Kato)
1 3.	Optimal Portfolio of Low Liquid Assets -----	192
	みずほ第一フィナンシャルテクノロジー(株)	松本 浩一 (Koichi Matsumoto)
IV. Mathematical Finance		
1 4.	Asymptotic Analyses for an Exponential Hedging Problem -----	212
	阪大・基礎工学	関根 順 (Jun Sekine)
1 5.	Stock price process and the long-range percolation -----	229
	日大・文理	黒田 耕嗣 (Koji Kuroda)
	岡山大・文化科学	村井 浄信 (Joshin Murai) *
1 6.	Homogeneous Law Invariant Coherent Multiperiod Value Measures and their Limits -----	243
	東大・数理科学	楠岡 成雄 (Shigeo Kusuoka) *
	”	森本 祐司 (Yuji Morimoto)
V. Game Theory		
1 7.	Cournot Oligopoly with Network Formation -----	249
	慶應大・経済学	川又 邦雄 (Kunio Kawamata) *
	”	玉田 康成 (Yasunari Tamada)
1 8.	Computation of Strategic Solutions of Public Good Provision Games with Indivisibilities -----	267
	慶應大・経済学	増澤 拓也 (Takuya Masuzawa)
1 9.	Payoff Improvement of Measurable $\alpha$ -Cores through Communications -----	272
	慶應大・経済学	平瀬 和基 (Kazuki Hirase) *
	東工大・社会理工学	内海 幸久 (Yukihisa Utsumi)
