

MEMOIRS OF THE FACULTY OF SCIENCE, KYOTO UNIVERSITY, SERIES OF BIOLOGY
Vol. II, No. 1, pp. 72-91, Sept. 1968

Second Report of the Regular Limnological Survey of Lake Biwa (1967)

I. Plankton in General and Phytoplankton*

By

Ken-ichiro NEGORO

Otsu Hydrobiological Station, Kyoto University

The collecting stations of plankton samples and methods of the survey were just the same as described in the first report (1967).

I. The volume of the total plankton

The volume of the precipitated, total plankton has been measured as seen in Table 1 and Table 2.

Table 1. The volume of the total plankton in cm^3 per m^3 of lake water at Station Ie-1 in 1967

Date	1967 I-13	1967 II-15	1967 III-13	1967 IV-14	1967 V-11	1967 VI-15	1967 VII-17

Based on the results of the regular survey of the past ten years (from 1950 to 1959) by the Experimental Fishery Station of Shiga Prefecture, I have calculated the standard, mean volume of the totalplankton in each month in the main basin of Lake Biwa as follows (Table 3) :

Table 3. The mean volume of the total plankton in each month during the past ten years (1950-1959) in the main basin of Lake Biwa

(1)

Month	I (Jan.)	II (Feb.)	III (Mar.)	IV (Apr.)	V (May)	VI (June)	VII (July)
Zone							
0~10m	1.85	1.89	1.85	4.32	5.20	4.97	4.72
10~20m	1.03	1.31	1.47	2.51	3.03	2.96	4.60
20~40m	1.28	0.97	1.18	2.01	2.07	1.82	1.78
40~70m	1.03	0.91	0.76	0.90	1.06	0.57	0.59
Average	1.30	1.27	1.32	2.44	2.84	2.85	2.92

(2)

Month	VIII (Aug.)	IX (Sept.)	X (Oct.)	XI (Nov.)	XII (Dec.)	Average
Zone						
0~10m	4.76	4.87	4.96	3.98	3.14	3.83
10~20m	2.50	2.26	2.11	2.37	1.84	2.33
20~40m	1.12	0.92	0.75	1.86	2.15	1.49
40~70m	0.51	0.51	0.34	0.50	1.74	0.79
Average	2.22	2.22	1.92	2.18	2.22	(2.11)

Compared with this standard table, the average volume of the total plankton in each month of 1967 was fairly larger in April, September, and October, smaller in May, July, August, and December. But the total average of the year was almost equal with the standard.

In the main basin the average volume of the total plankton in each month was largest in September and smallest in December, while in the accessory basin it was largest in May and smallest in February. The average volume of the total plankton through the year was larger in the accessory basin than in main basin. It was smaller than that of the foregoing year in both basins. Especially in the accessory basin it was far smaller, being 9.95 cm³ per m³ of lake water in the foregoing year.

II. The volume of the phytoplankton

By using the precipitated material; the reading of the volume of the phytoplankton may be often easily done, when the zooplankton is mainly composed of the relatively large animals, such as Copepoda or Cladocera and the colored

phytoplankton is laid on the colorless zooplankton, but it is sometimes almost difficult, when the zooplankton is composed of the relatively small animals and is perfectly mixed with the phytoplankton.

For that reason the volume of phytoplankton may be sometimes correctly, and sometime with a small accuracy measured.

The volume of phytoplankton in the main basin was outlined as shown in Table 4:

Table 4. The volume of the phytoplankton at Station Ie-1 of the main basin in 1967

Date	1967	1967	1967	1967	1967	1967	1967

IV. The zonal distribution and the seasonal succession of the phytoplankton at Station Ie-1 of the main basin

The following algae were found in the samples collected at Station Ie-1 :
Chrysophyta

- 1) *Melosira solida* Eulestein
- 2) *Melosira italicica* (Ehr.) Kützing
- 3) *Stephanodiscus carconensis* Grunow und var. *pusilla* Grunow
- 4) *Rhizosolenia longisetata* Zacharias
- 5) *Asterionella formosa* Hassal
- 6) *Dinobryon divergens* Imhof
- 7) *Mallomonas fastigata* Zacharias

Pyrophyta

- 8) *Ceratium hirundinella* (O. F. Müller) Schrank

Chlorophyta

- 9) *Pediastrum Biwae* Negoro and var. *triangulatum* Negoro
- 10) *Oocystis* sp.
- 11) *Lagerheimia citriformis* (Snow) G. M. Smith
- 12) *Ankistrodesmus falcatus* (Corda) Ralfs
- 13) *Coelastrum microporum* Nägeli
- 14) *Eudorina elegans* Ehrenberg
- 15) *Staurastrum dorsidentiferum* W. et G. S. West var. *ornatum* Grönbl.
- 16) *Staurastrum limneticum* Schmidle var. *Burmense* W. et G. S. West
- 17) *Spondylosium moniliformis* Lundell*
- 18) *Cosmocladium constrictum* Arch.
- 19) *Closterium aciculare* Tuffen West var. *subpronum* W. et G.S. West

Cyanophyta

- 20) *Aphanocapsa elachista* W. et G. S. West var. *conferta* W. et G. S. West
- 21) *Chroococcus dispersus* (Keissler) Lemmermann
- 22) *Aphanothecce clathrata* W. et G. S. West
- 23) *Lyngbya limnetica* Lemmermann

The composition and the zonal distribution of the phytoplankton in each month were as shown in Table 6 :

Table 6. Phytoplankters per m³ of lake water at Station Ie-1. A unit of number corresponds to ten thousand (10,000).

	1961-I-13

**V. The distribution and the succession of the phytoplankton
at Stations Nb-2, Nb-5, and Na-3 of the accessory basin**

The following algae were found in the samples collected at Stations Nb-2, Nb-5, and Na-3 of the accessory basin :

Chrysophyta

- 1) *Melosira solida* Eulenstein
- 2) *Melosira italicica* (Ehr.) Kützing
- 3) *Melosira granulata* (Ehr.) Ralfs
- 4) *Melosira* sp.
- 5) *Stephanodiscus carconensis* Grunow and var. *pusilla* Grunow
- 6) *Rhizosolenia longiseta* Zacharias
- 7) *Fragilaria crotensis* Kitton
- 8) *Asterionella formosa* Hassal
- 9) *Synedra ulna* (Niszs) Ehrenberg
- 10) *Dinobryon cylindricum* Imhof
- 11) *Dinobryon divergens* Imhof
- 12) *Mallomonas fastigata* Zacharias

Pyrophyta

- 13) *Ceratium hirundinella* (O. F. Müller) Schrank

Chlorophyta

- 14) *Pediastrum Biwae* Negoro and var. *triangulatum* Negoro
- 15) *Pediastrum duplex* Meyen
- 16) *Oocystis* sp.
- 17) *Sphaerocystis Schroeteri* Chodat
- 18) *Ankistrodesmus falcatus* (Corda) Ralfs
- 19) *Actinastrum* sp.
- 20) *Dictyosphaerium pulchellum* Wood
- 21) *Coelastrum microporum* Nügeli
- 22) *Scenedesmus* sp.
- 23) *Chlamydomonas* sp.
- 24) *Eudorina elegans* Ehrenberg
- 25) *Staurastrum dorsidentiferum* W. et G. S. West var. *ornatum* Grönbl.
- 26) *Staurastrum limneticum* Schmidle var. *Burmense* W. et G. S. West
- 27) *Staurastrum pingue* Teiling
- 28) *Cosmocladium constrictum* Arch.
- 29) *Arthrodesmus* sp.
- 30) *Spondylosium moniliformis* Lundell
- 31) *Closterium aciculare* Tuffen West var. *subpronum* W. et G. S. West
- 32) *Spirogyra* sp.

Cyanophyta

- 33) *Microcystis aeruginosa* Kützing
- 34) *Aphanocapsa elachista* W. et G. S. West var. *conferta* W. et G. S. West
- 35) *Aphanothece clathrata* W. et G. S. West
- 36) *Merismopedia elegans* A. Br.
- 37) *Anabaena macrospora* Klebahn
- 38) *Lyngbya limnetica* Lemmermann

The composition and the distribution of the phytoplankton in each month were as shown in Table 9 :

Table 9. Phytoplankton per m³ of lake water at Stations Nb-2, Nb-5, and Na-3.
A unit of number corresponds to ten thousand (10,000).
