Nonlinear Evolution Equations
and Applications

September, 1996

Research Institute for Mathematical Sciences

Kyoto University, Kyoto, Japan

Preface

This volume collects most of the lectures delivered at the conference, *Nonlinear Evolution Equations and Applications*, held at Research Institute for Mathematical Sciences, Kyoto University (Kyoto, Japan), during July 26–28, 1995. Most of the lectures are concerned with the theory of nonlinear evolution equations, their applications to nonlinear partial differential equations and related topics. It is my pleasure to thank all those who contributed their manuscripts to this volume.

The conference was made possible by financial support from the Institute. I wish to thank the Institute for its support and for the publication of these proceedings.

非線形発展方程式とその応用
研究集会報告集

1995年7月26日～7月28日

研究代表者 岡沢 登 (Noboru Okazawa)

目 次

1. On existence of viscosity solutions and weak solutions to the Cauchy problem for $u_t = u\Delta u - \gamma|\nabla u|^2$ 1
 早稲田大・理工 穴田 浩一 (Kouichi Anada)
 早稲田大・理工 堤 正義 (Masayoshi Tsutsumi)
2. Regularizing effects for a class of Hamilton-Jacobi equations 18
 Paris 大 IX・Dauphine 有澤 真理子 (Mariko Arisawa)
 Paris 大 IX・Dauphine Agnes Tourin
3. Nonlinear m -sectorial operators and time-dependent Ginzburg-Landau equations 33
 東京理科大・理 宇内 昭人 (Akihito Unai)
4. Abstract quasilinear integrodifferential equations of hyperbolic type 41
 早稲田大・教育 岡 裕和 (Hirokazu Oka)
5. Operator matrices and systems of evolution equations 61
 広島大・理 Klaus-J. Engel
6. Partial regularity for electrochemical machining with threshold current 81
 千葉大・Bonn 大 Georg S. Weiss
7. Asymptotic behaviors of radially symmetric solutions of $\square u = |u|^p$ for super critical values p in high dimensions 88
 北海道大・理 久保 英夫 (Hideo Kubo)
 北海道大・理 久保田 幸次 (Kôji Kubota)
8. Life-span of classical solutions to nonlinear wave equations in four space dimensions 95
 Fudan 大・数学 李 大潜 (Li Ta-tsien)
9. Global solutions to the semilinear wave equation for large space dimensions 110
 Bulgaria 科学 Academy Vladimir Georgiev
10. Asymptotic decay toward the planar rarefaction waves of solutions for viscous conservation laws in several space dimensions 116
 九州大・数理 伊藤 一男 (Kazuo Ito)

11. Asymptotic behavior of blowup solutions of a parabolic equation
with the p -Laplacian 136
東京大・数理 藤井 中 (Ataru Fujii)
東京大・数理 太田 雅人 (Masahito Ohta)
12. Structure of radial solutions to
 $\Delta u + \frac{1}{2}x \cdot \nabla u + \lambda u + |u|^{p-1}u = 0$ in \mathbf{R}^n 151
早稲田大・理工 廣瀬 宗光 (Munemitsu Hirose)
13. On the exterior problem of compressible
Navier-Stokes equation 170
筑波大・数学 小林 孝行 (Takayuki Kobayashi)

- The manuscript of the following lecture was not available before the deadline.

Some global existence results for degenerate equations of Kirchhoff type

L'aquila 大・数学

Piero A. D'ancona
