

# Sufficient conditions for starlikeness

Jian-Lin Li and SHIGEYOSHI OWA

*Abstract.* The object of the present paper is to consider a sufficient condition for analytic functions in the open unit disk to be starlike.

## 1 Introduction.

Let  $A$  be the class of functions of the form

$$f(z) = z + \sum_{n=2}^{\infty} a_n z^n$$

which are analytic in the open unit disk  $U = \{z \in \mathbb{C} : |z| < 1\}$ . A function  $f(z)$  in  $A$  is said to be starlike of order  $\alpha$  in  $U$  if it satisfies

$$\operatorname{Re} \left\{ \frac{z f'(z)}{f(z)} \right\} > \alpha \quad (z \in U).$$

We denote by  $S^*(\alpha)$  the subclass of  $A$  consisting of all functions  $f(z)$  which are starlike of order  $\alpha$  in  $U$ . We denote by  $S^*(0) \equiv S^*$ .

Lewandowski, Miller and Zlotkiewicz [1] have shown

**Theorem A.** *If  $f(z) \in A$  satisfies*

$$\operatorname{Re} \left\{ \frac{z f'(z)}{f(z)} \left( \frac{z f''(z)}{f'(z)} + 1 \right) \right\} > 0 \quad (z \in U),$$

*then  $f(z) \in S^*$ .*

---

*Mathematics Subject Classification* (1991): 30C45

*Key Words and Phrases:* Analytic, starlikeness.

Recently, Ramesha, Kumar and Padmanabhan [5] have given

**Theorem B.** *If  $f(z) \in A$  satisfies*

$$\operatorname{Re} \left\{ \frac{zf'(z)}{f(z)} \left( \alpha \frac{zf''(z)}{f'(z)} + 1 \right) \right\} > 0 \quad (z \in U)$$

*for some  $\alpha (\alpha \geq 0)$ , then  $f(z) \in S^*$ .*

On the other hand, Obradović [4] has proved

**Theorem C.** *If  $f(z) \in A$  satisfies*

$$\left| \frac{zf''(z)}{f'(z)} \left( \frac{zf'(z)}{f(z)} - 1 \right) \right| < \frac{1}{6} \quad (z \in U),$$

*then  $f(z) \in S^*$ .*

Further, more recently, Li and Owa [2] have derived

**Theorem D.** *If  $f(z) \in A$  satisfies*

$$\left| \frac{zf''(z)}{f'(z)} \left( \frac{zf'(z)}{f(z)} - 1 \right) \right| < \frac{3}{2} \quad (z \in U),$$

*then  $f(z) \in S^*$ .*

To derive our theorems, we need the following lemma due to Miller and Mocanu [3].

**Lemma.** *Let  $\Omega$  be a set in the complex plane  $\mathbb{C}$ . Suppose that  $\Phi$  is a mapping from  $\mathbb{C}^2 \times U$  to  $\mathbb{C}$  which satisfies  $\Phi(ix, y; z) \notin \Omega$  for  $z \in U$ , and for all real  $x, y$  such that  $y \leq -(1+x^2)/2$ . If the function  $p(z)$  is analytic in  $U$  with  $p(0) = 1$  and  $\Phi(p(z), zp'(z); z) \in \Omega$  for all  $z \in U$ , then  $\operatorname{Re}(p(z)) > 0$  ( $z \in U$ ).*

## 2 Conditions for starlikeness

In this section, we derive some sufficient conditions for starlikeness, which are the improvements of the previous theorems. Our first result is contained in

**Theorem 1.** *If  $f(z) \in A$  satisfies*

$$\operatorname{Re} \left\{ \frac{zf'(z)}{f(z)} \left( \alpha \frac{zf''(z)}{f'(z)} + 1 \right) \right\} > -\frac{\alpha}{2} \quad (z \in U) \quad (2.1)$$

for some  $\alpha$  ( $\alpha \geq 0$ ), then  $f(z) \in S^*$ .

*Proof.* Let us define the analytic function  $p(z)$  in  $U$  by

$$p(z) = \frac{zf'(z)}{f(z)} = 1 + p_1z + p_2z^2 + \dots \quad (2.2)$$

Making use of the logarithmic differentiations of both sides in (2.2), we know that

$$\frac{zf'(z)}{f(z)} \left( \alpha \frac{zf''(z)}{f'(z)} + 1 \right) = \alpha zp'(z) + \alpha p(z)^2 + (1 - \alpha)p(z). \quad (2.3)$$

Let  $\Omega = \{w \in \mathbb{C} : \operatorname{Re}(w) > -\alpha/2\}$  and

$$\Phi(z_1, z_2; z) = \alpha z_2 + \alpha z_1^2 + (1 - \alpha)z_1.$$

Then from (2.1) and (2.3), we have  $\Phi(p(z), zp'(z); z) \in \Omega$  for all  $z \in U$ . Further, we have

$$\begin{aligned} \operatorname{Re} \{ \Phi(ix, y; z) \} &= \alpha y - \alpha x^2 \\ &\leq -\frac{\alpha}{2} - \frac{3}{2}\alpha x^2 \\ &\leq -\frac{\alpha}{2}. \end{aligned}$$

This shows that  $\Phi(ix, y; z) \in \Omega$ . Therefore, by virtue of Lemma, we conclude that  $f(z) \in S^*$ .

Letting  $\alpha = 1$  in Theorem 1, we have

**Corollary 1.** If  $f(z) \in A$  satisfies

$$\operatorname{Re} \left\{ \frac{zf'(z)}{f(z)} \left( \frac{zf''(z)}{f'(z)} + 1 \right) \right\} > -\frac{1}{2} \quad (z \in U),$$

then  $f(z) \in S^*$ .

Next we derive

**Theorem 2.** If  $f(z) \in A$  satisfies

$$\operatorname{Re} \left\{ \frac{zf'(z)}{f(z)} \left( \alpha \frac{zf''(z)}{f'(z)} + 1 \right) \right\} > -\frac{\alpha^2}{4}(1-\alpha) \quad (z \in U) \quad (2.4)$$

for some  $\alpha (0 \leq \alpha < 2)$ , then  $f(z) \in S^*(\alpha/2)$ .

*Proof* Define the function  $p(z)$  by

$$\frac{zf'(z)}{f(z)} = \left(1 - \frac{\alpha}{2}\right)p(z) + \frac{\alpha}{2} \quad (z \in U). \quad (2.5)$$

Then  $p(z)$  is analytic in  $U$  and  $p(z) = 1 + p_1z + p_2z^2 + \dots$ . Differentiating (2.5) logarithmically, we see that

$$\begin{aligned} \frac{zf'(z)}{f(z)} \left( \alpha \frac{zf''(z)}{f'(z)} + 1 \right) &= \alpha \left(1 - \frac{\alpha}{2}\right) zp'(z) + \alpha \left(1 - \frac{\alpha}{2}\right)^2 p(z)^2 \\ &+ \left(1 - \frac{\alpha}{2}\right) (\alpha^2 + 1 - \alpha)p(z) + \frac{\alpha^3}{4} + \frac{\alpha}{2}(1 - \alpha). \end{aligned} \quad (2.6)$$

Let us define

$$\Omega = \left\{ w \in \mathbb{C} : \operatorname{Re}(w) > -\frac{(1-\alpha)\alpha^2}{4} \right\}$$

and

$$\Phi(z_1, z_2; z) = \alpha \left(1 - \frac{\alpha}{2}\right) z_2 + \alpha \left(1 - \frac{\alpha}{2}\right)^2 z_1^2 + \left(1 - \frac{\alpha}{2}\right) (\alpha^2 - \alpha + 1) z_1 + \frac{\alpha^3}{4} + \frac{\alpha}{2}(1 - \alpha).$$

Then by (2.4) and (2.6), we know that  $\Phi(p(z), zp'(z); z) \in \Omega$ . Further, for all  $z \in U$  and for all real  $x, y$  such that  $y \leq -(1+x^2)/2$ , we have

$$\operatorname{Re} \{ \Phi(ix, y; z) \} = \alpha \left(1 - \frac{\alpha}{2}\right) y - \alpha \left(1 - \frac{\alpha}{2}\right)^2 x^2 + \frac{\alpha^3}{4} + \frac{\alpha}{2}(1 - \alpha)$$

$$\begin{aligned} &\leq \frac{\alpha^2}{4}(\alpha - 1) - \frac{\alpha}{2}\left(1 - \frac{\alpha}{2}\right)(3 - \alpha)x^2 \\ &\leq -\frac{\alpha^2}{4}(1 - \alpha). \end{aligned}$$

Thus, by applying Lemma, we have  $\operatorname{Re}(p(z)) > 0$  for  $z \in U$ , which, in view of (2.5), is equivalent to  $f(z) \in S^*(\alpha/2)$ .

If we take  $\alpha = 1$  in Theorem 2, then we have

**Corollary 2.** *If  $f(z)$  in  $A$  satisfies*

$$\operatorname{Re} \left\{ \frac{zf'(z)}{f(z)} \left( \frac{zf''(z)}{f'(z)} + 1 \right) \right\} > 0 \quad (z \in U),$$

then  $f(z) \in S^*(1/2)$ .

Finally, we consider

**Theorem 3.** *If  $f(z) \in A$  satisfies*

$$\left| \frac{zf''(z)}{f'(z)} \left( \frac{zf'(z)}{f(z)} - 1 \right) \right| < \rho \quad (z \in U),$$

where

$$\rho = \left( \frac{827 + 73\sqrt{73}}{288} \right)^{\frac{1}{2}} = 2.2443697\dots,$$

then  $f(z) \in S^*$ .

**Proof.** Let the function  $p(z)$  be defined by (2.2). Then it follows that

$$\frac{zf''(z)}{f'(z)} \left( \frac{zf'(z)}{f(z)} - 1 \right) = (p(z) - 1) \left( \frac{zp'(z)}{p(z)} + p(z) - 1 \right). \quad (2.7)$$

Letting  $\Omega = \{w \in \mathbb{C} : |w| < \rho\}$  and

$$\Phi(z_1, z_2 : z) = (z_1 - 1) \left( \frac{z_2}{z_1} + z_1 - 1 \right),$$

we have  $\Phi(p(z), zp'(z); z) \in \Omega$ . Further, for all  $z \in U$ , and for all real  $x, y$  with  $y \leq -(1+x^2)/2$ ,  $\Phi(p(z), zp'(z); z)$  satisfies

$$|\Phi(ix, y; z)| = \sqrt{(1+x^2) \left(1 + \frac{(x^2-y)^2}{x^2}\right)} \equiv \sqrt{g(x^2, y)}, \quad (2.8)$$

where  $t = x^2 > 0$  and  $y \leq -(1+t)/2$ . Since

$$\frac{\partial g(t, y)}{\partial y} = 2 \frac{1+t}{t} (y-t) < 0,$$

we have

$$g(t, y) \geq g\left(t, -\frac{1+t}{t}\right) = \frac{(t+1)^2(9t+1)}{4t} \equiv h(t). \quad (2.9)$$

Further, since

$$h'(t) = \frac{(t+1) \left(t + \frac{\sqrt{73}+1}{36}\right) \left(t - \frac{\sqrt{73}-1}{36}\right)}{4t^2},$$

we obtain

$$\min_{t>0} h(t) = h\left(\frac{\sqrt{73}-1}{36}\right) = \frac{827+73\sqrt{73}}{288} = \rho^2. \quad (2.10)$$

This implies that  $|\Phi(ix, y; z)| \geq \rho$ . It follows from (2.8), (2.9) and (2.10) that  $\Phi(ix, y; z) \notin \Omega$ . An application of Lemma gives us that  $\operatorname{Re}(p(z)) > 0$  for  $z \in U$ . Thus we conclude that  $f(z) \in S^*$ .
