Action Meets Syntax: Evolingo and Biolinguistic Minimalism

Koji Fujita
Kyoto University

“...an evolutionary novelty may result from the combination of two pre-existing parts with unrelated functions.” - M. Ridley

“To create is to recombine.” - F. Jacob

“Evolution has recruited for language purposes brains structures that performed other functions in non-human primates.” - T. Deacon

(1) Design ............ Microgenesis
(2) Development ... Ontogenesis
(3) Evolution ....... Phylogensis
Logical Problem of Language Evolution
(Darwin’s Problem)

- How was it possible for FL to emerge during the hominin evolution?

- “… UG is not evolutionarily viable.”
  (Christiansen & Chater 2008)

Language evolution is an instance of biological evolution (and cultural evolution).

→ If one’s theory of biological evolution fails to account for the evolution of FL, then it needs a serious reconsideration.

Neo-Darwinism (Modern Synthesis)

- Adaptationist Program
  - Functionalism
  - Natural Selection / Sexual Selection as the First Resort
  - Gradualism

(1) Descriptive Adequacy → <PHON,SEM>
(2) Explanatory Adequacy → I-Language
(3) Evolutionary Adequacy → Human FL
Neo-Neo-Darwinism (Expanded Synthesis)

- Non-adaptationist Program
  - Formalism
- Pluralism
  - NS/SS as the Last Resort
- Punctuated Equilibrium (saltationism?)
- Exaptation

Biolinguistic Minimalism
- (Almost) No Internal Modularity
- Anti-adaptationism

Evolutionary Psychology
- Massive Modularity
- Adaptationism

Arrival of the Fittest
- Survival of the Fittest

The functions of the components that jointly constituted the language faculty later in the hominin evolution may have had nothing to do with the current (or even original) function(s) of language.

Animal communication may have only an indirect bearing on language evolution.
Strong Minimalist Thesis (SMT)

- Language is an optimal solution to legibility conditions.
- Unexplained elements of UG are zero.
- There is virtually nothing special about the origins and evolution of language.

Are its components uniquely human, too?

Minimize the discontinuity elements in language evolution.

FLN / FLB

Language is uniquely human.

“… unbounded Merge is not only a genetically determined property of language, but also unique to it.”

“… for both evolution and development, there seems to be little reason to suppose that there were precursors to unbounded Merge.”

- N. Chomsky
... no clear evidence for languages that
demonstrably lack recursion of any kind.
(B. Heine & T. Kuteva)

Recursion is absent in Pirahã.
(D. Everett)

Many languages have no, or very
circumscribed recursion in their syntax.
(N. Evans & S. Levinson)

Recursion is just a theoretical artifact.
(D. Bickerton)

Derivational recursiveness:
- Recursive Merge

Representational recursiveness:
- Self-embedding

(1) \[
\text{CP C [TP T [\text{vP v} [\text{VP V} [\text{CP C [TP T [vP v [VP V ...}}
\]
(2) \[
\text{DP D [NP N [PP P [DP D [NP N [PP P ...}
\]
(3) \[
\text{TP T [vP v [VP V]]}
\]

Representational recursiveness is just one aspect of derivational recursiveness.

Actual application of Merge is subject to a variety of constraints.

If CP is never selected by a head, then there will be no clausal complementation in that language. (functional parametrization?)
Language evolution boils down to the emergence of:
- Recursive Merge
- Interfaces
- Lexicon

Decomposing/Factorizing Merge
- Concatenate + Label (Hornstein 2009)
- (Proto-) Merge + Embed (Fukui 2006)
- Only the labeling operation belongs to FLN.

Labeling and `Embed`
- Proto-Merge \((\alpha, \beta) = \{\alpha, \beta\}\):
  \[
  \begin{array}{c}
  \alpha \\
  \downarrow
  \end{array}
  \begin{array}{c}
  \beta \\
  \end{array}
  \] (no endocentricity)
- Base Set (BS) = \{\alpha, \beta\}
- Embed \((\alpha, \{\alpha, \beta\}) = \alpha \sqcup BS = \{\alpha, \{\alpha, \beta\}\}:
  \[
  \begin{array}{c}
  \alpha \\
  \downarrow
  \end{array}
  \begin{array}{c}
  \beta \\
  \end{array}
  \] → endocentricity

Proto-Merge without Embed

Recursive Merge with Embed
Non-Recursive Proto-Merge

Recursive Merge

Embed

cf. Exocentric compounds as a fossil of proto-syntax (Progovac & Locke 2008)

Internal Merge (Move) + Embed

Why not β for direct Embed without Move?
Embed (β, {γ, {α, {β}}})

Local Embed

Non-local Embed

→ exocentricity

Internally-headed relatives:

(1) [John-ga saifu-wo nakushita no]-wo Mary-ga mitsuketa.
[John-Nom wallet-Acc lost Comp]-Acc Mary-Nom found
‘Mary found the wallet John had lost.’
Merge = Move = Embed (set formation)

- Embed is itself an instance of Merge applying recursively.
- No independent evolutionary/developmental scenario necessary for Move and Embed.
- Embed as an exaptation of proto-Merge?

Labeling Two Word Utterances

(1) no label

```
  milk    cup
```

(2) endocentric

```
  cup    milk    cup
```

(3) *exocentric &

```
milk    cup
(in the sense of ‘milk & cup’)
```

Recursive Merge is already fully operative at the two-word stage.

(see Roeper 2007)

But what about truly exocentric compounds?

(1) Tatemono-no takai-hikui-ga juuyoo da.

```
building-Gen high-low Nom important is
“The height of the building matters.”
```

```
A    N
```

“Absolute categorial exocentricity”

(1) [A N+N]:
Serbo-Croatian ribòlik ‘fish+shape=fish-shaped’

(2) [A V+V ]:
Turkish yapıs yapıs ‘stick+stick=sticky’

(3) [A V+N ]:
French lève-blocs ‘lift+block=block lifter’

(4) [A N+V]:
Korean neknek-hata ‘sufficiency+to be=sufficient’

Some Possible Precursors

- Syllable Structure
- Birdsong
- Music
- Social Intelligence
- Theory of Mind (ToM)
- Machiavellian Intelligence
- Navigation and Foraging
- Number
- Manual Dexterity, Motor Control
- Tool Using and Tool Making
- Action Grammar
Action Grammar

- Pairing Method
- Pot Method
- Subassembly Method

P. M. Greenfield:

I. Pairing Strategy

- Merge (saw, Mary) = {saw, Mary}
- Merge (John, {saw, Mary}) = {John, {saw, Mary}}

II. Pot Strategy
III. Subassembly Strategy

- Merge (saw, Mary) = {saw, Mary}
- Merge (the, boy) = {the, boy}
- Merge ({the, boy}, {saw, Mary})
  = {{the, boy}, {saw, Mary}}

Subassembly strategy required

Subassembly Strategy in Compounding

Swedish: barn bok klub:

- barn
- bok
- klub

English: child book club:

- child
- book
- club

**Subassembly-type Merge (Sub-Merge)** is the genuine recursive device in human language.

```text
saw
  the
the
boy
```

What if the bare noun *boy* is already a syntactically complex object (*n*+BOY, etc.)?

---

**Anti-Lexicalism**

- Words are also generated by recursive syntax.
- The (substantive) lexicon is decomposed into FLN (recursion) and FLB (SM/CI)
- The syntax-CI interface may be optimized
- There is *virtually* no lexicon.

---

**Lexicon as a Conceptual Barrier**

- To the extent that the lexicon belongs to FLN as a distinct component of grammar, language evolution becomes a harder topic.

---

**Syntactic Nature of ‘Lexical’ Verbs**

1. John opened the door again.
   - repetitve reading
   - restitutive reading
2. (2) \[ vP \quad \text{again(i)} \]
   \[ \downarrow \quad \text{CAUSE} \]
   \[ \downarrow \quad \text{VP} \quad \text{again(ii)} \]
   \[ \downarrow \quad \text{v} \]
   \[ \downarrow \quad \text{the door} \]
   \[ \downarrow \quad \text{OPEN} \]
3. LCS: \[ x \quad \text{CAUSE} \quad y \quad \text{OPEN} \quad \text{again(ii)} \quad \text{again(i)} \]
Ditransitives

(1)

a. John gave Mary a book.
   
   b. [\(x \役 \text{John} \役 \text{v} \役 \text{Mary v a book \}}]
   
   c. [J. \text{CAUSE} [M. \text{HAVE} B.]]

(2)

a. John gave a book to Mary.
   
   b. [\(x \役 \text{John} \役 \text{v} \役 \text{a book v to Mary \}}]
   
   c. [J. \text{CAUSE} [B. \text{GO} to M.]]

- The mapping between syntactic structure and conceptual structure is straightforward.

Evidence from Developmental Data

CAUSE (2;0.4) \(\geq\) HAVE (2;0.7) \(\geq\)
Double Obj verbs (2;1.6) 
GO (2;4.0) \(\geq\) Dative Obj verbs (2;4.9)

Merge in Early Grammar

- “No verb is an island.”

- “Children start to use Merge already with their very first word combinations.”

Three-Layered Split VP

\[
\begin{align*}
\text{VP1} & \quad \text{V}' \\
\text{VP2} & \quad \text{Causer} \\
\text{V2} & \quad \text{V}' \\
\text{VP3} & \quad \text{Theme} \\
\text{V} & \quad \text{Agent} \\
\end{align*}
\]

cf. [\(x \text{DO} [x \text{CAUSE} [y \text{BECOME} \ldots ]]\)]
“Causes are realized in a position that is asymmetrically c-commanded by the Agent position.”

(1) This glass breaks easily.
[TP this glass T [µIMP V1 [VP2 V2 [VP3 breaks this glass ]]]]

(2) This glass suddenly broke.
[TP this glass T [VP1 V1 [µIMP V2 [VP3 breaks this glass ]]]]

<table>

</tbody>
</table>

*tham/hây* causatives in Thai:
(1) *Saakhaa* tham kracok teek dooy tançay.
Saka cause mirror break by intend
(2) Saakhaa hây dek win dooy tançay.
Saka have child run by intend
(3) Saakhaa tham hây kaw?ii lom dooy tançay.
Saka cause have chair fall by intend

**Simpler Syntax?** (Culicover and Jackendoff 2005)

John gave Mary a book.
CS: [ x CAUSE [ y HAVE z ]]

Layered VP:
```
  vP
   v
   John
V
Mary
V'
```

Flat VP:
```
  VP
  v
  John
  V
  Mary
  a book
```

John
  v'
  VP
  John
  V
  Mary
  a book

Mary
  V'
  a book
- Flat VP: optimal for SM-system
  - Language for communication
  - Lexicalism

- Layerd VP: optimal for CI-system
  - Language for thought
  - Anti-Lexicalism

- Symplicity is in the eye of the beholder.

(1) John killed the cat on purpose.
(2) John caused the cat to die on purpose.

J. Fodor (1970)

(1') \( [\text{vP x CAUSE} [\text{vP y DIE}]] \)
(2') \( [\text{vP x v(cause)} [\text{vP V [TP T [vP y v(die) [vP V]]]]]} \)

- From FLB to FLN:
  - Recursive syntax could be an exaptation from the recursive CI-system.

Given that \( bok \) is syntactically complex, the right-branching compounding also requires Sub-Merge.

\[ \rightarrow \text{‘Root’ compounding} \]
Exocentric compounds are in fact endocentric.

(1) $A + A \rightarrow N$

(2) $\sqrt{\cdot} + \sqrt{\cdot} + n \rightarrow N$

The issue of whether protolanguage was holophrastic (à la Wray, Arbib) or synthetic (à la Bickerton, Tallerman) is largely irrelevant here.

Word-like elements in protolanguage (proto-words) could exist in the absence/prior to syntax.

From Pot to Subassembly
From Subassembly to Merge
