Algebraic Number Theory

January, 1987

Research Institute for Mathematical Sciences

Kyoto University, Kyoto, Japan

Preface

This brochure contains account of all the lectures at the symposium on Algebraic Number Theory held at the Research Institute for Mathematical Sciences (RIMS), the University of Kyoto, from June 22 through July 3, 1986. This symposium was jointly sponsored by the RIMS and the Taniguchi Foundation and was also supported by the Grant-in-Aid for Scientific Research from the Ministry of Education (Prof. K. Shiratani of Kyushu Univ.). We are thankful to these institutions, and we would also like to express our thanks to the lecturers for their willing cooperation.

G. Fujisaki

代数の数論
研究集会報告集

1986年 6月30日～ 7月 3日

研究代表者 藤崎 源二郎 (Genjiro Fujisaki)

目 次

1. Dedekind sums and special values of L-functions	1
名大・理 伊藤 博 (Hiroshi Ito)	
2. Theta functions on the hyperbolic three space	9
Rutgers Univ. Robert Sczech	
3. Niedere Potenzen von Ringklasseneinheiten	21
Univ. Augsburg Reinhard Schertz	
4. On some generic expression of Gauss sums	35
都立大・理 三木 博雄 (Hiroo Miki)	
5. Congruence relations between class numbers of quadratic fields	43
阪大・理 山本 芳彦 (Yoshihiko Yamamoto)	
6. THE CLASS NUMBER TWO PROBLEM FOR CERTAIN QUARTIC FIELDS	51
Carleton Univ. Kenneth S. Williams	
7. Nombres de classes dans certaines extensions infinies	60
Univ. de Grenoble par R. Gillard	
8. Existence of an unramified cyclic extension and congruence conditions	72
都立大・理 石田 信 (Makoto Ishida)	
9. On p-adic Galois representations attached to the elliptic curves over $\mathbb{F}_p[[t]]$	79
東大・理 藤原 靖 (Yasushi Fujiwara)
