

An extension of Nunokawa lemma

Hitoshi Shiraishi

Abstract

Let $\mathcal{H}[a_0, n]$ be the class of functions $p(z) = a_0 + a_n z^n + \cdots$ which are analytic in the open unit disk $\mathbb{U}$. For functions $f(z)$ which are analytic in $\mathbb{U}$ with $f(0) = 1$, M. Nunokawa (Proc. Japan Acad., Ser. A **68** (1992), 152–153) have shown some theorems. The object of the present paper is to discuss Nunokawa lemma for the class $\mathcal{H}[a_0, n]$.

1 Introduction

Let $\mathcal{H}[a_0, n]$ denote the class of functions $p(z)$ of the form

$$p(z) = a_0 + \sum_{k=n}^{\infty} a_k z^k$$

which are analytic in the open unit disk $\mathbb{U} = \{z \in \mathbb{C} : |z| < 1\}$ for some $a_0 \in \mathbb{C}$ and a positive integer n .

The basic tool in proving our results is the following lemma due to S. S. Miller and P. T. Mocanu [1] (also [2]).

Lemma 1. *Let the function $w(z)$ defined by*

$$w(z) = a_n z^n + a_{n+1} z^{n+1} + a_{n+2} z^{n+2} + \cdots \quad (n = 1, 2, 3, \dots)$$

be analytic in $\mathbb{U}$ with $w(0) = 0$. If $|w(z)|$ attains its maximum value on the circle $|z| = r$ at a point $z_0 \in \mathbb{U}$, then there exists a real number $m \geq n$ such that

$$\frac{z_0 w'(z_0)}{w(z_0)} = m.$$

2 Main result

Applying Lemma 1, we derive the following result.

2010 Mathematics Subject Classification : Primary 30C45

Keywords and phrases : analytic, univalent, Jack's lemma, Nunokawa lemma

Theorem 1. Let $p(z) \in \mathcal{H}[a_0, n]$ for some real $a_0 > 0$ and suppose that there exists a point $z_0 \in \mathbb{U}$ such that

$$\operatorname{Re}(p(z)) > 0 \quad \text{for } |z| < |z_0|$$

and $p(z_0) = \beta i$ is a pure imaginary number for some real $\beta \neq 0$.

Then we have

$$\frac{z_0 p'(z_0)}{p(z_0)} = il$$

where

$$l \geq \frac{n}{2} \left(\frac{a_0}{\beta} + \frac{\beta}{a_0} \right) \geq n$$

if $\beta > 0$ and

$$l \leq \frac{n}{2} \left(\frac{a_0}{\beta} + \frac{\beta}{a_0} \right) \leq -n$$

if $\beta < 0$.

Proof. Let us put

$$w(z) = \frac{a_0 - p(z)}{a_0 + p(z)} = c_n z^n + c_{n+1} z^{n+1} + c_{n+2} z^{n+2} + \dots \quad (z \in \mathbb{U}).$$

Then, we have that $w(z)$ is analytic in $|z| < |z_0|$, $w(0) = 0$, $|w(z)| < 1$ for $|z| < |z_0|$ and

$$|w(z_0)| = \left| \frac{a_0^2 - \beta^2 - 2a_0\beta i}{a_0^2 + \beta^2} \right| = 1.$$

From Lemma 1, we obtain

$$\frac{z_0 w'(z_0)}{w(z_0)} = \frac{-2a_0 z_0 p'(z_0)}{a_0^2 - \{p(z_0)\}^2} = \frac{-2a_0 z_0 p'(z_0)}{a_0^2 + \beta^2} = m \quad (m \geq n).$$

This shows that

$$z_0 p'(z_0) = -\frac{m}{2} \left(a_0 + \frac{\beta^2}{a_0} \right) \quad (m \geq n).$$

From the fact that $z_0 p'(z_0)$ is a real number and $p(z_0)$ is a pure imaginary number, we can put

$$\frac{z_0 p'(z_0)}{p(z_0)} = il$$

where l is a real number.

For the case $\beta > 0$, we have

$$\begin{aligned}
 l &= \operatorname{Im} \left(\frac{z_0 p'(z_0)}{p(z_0)} \right) \\
 &= \operatorname{Im} \left(-z_0 p'(z_0) \frac{1}{\beta} i \right) \\
 &= \frac{m}{2} \left(a_0 + \frac{\beta^2}{a_0} \right) \\
 &\geq \frac{n}{2} \left(a_0 + \frac{\beta^2}{a_0} \right) \frac{1}{\beta} \\
 &= \frac{n}{2} \left(\frac{a_0}{\beta} + \frac{\beta}{a_0} \right) \geq n
 \end{aligned}$$

and for the case $\beta < 0$, we get

$$\begin{aligned}
 l &= \operatorname{Im} \left(\frac{z_0 p'(z_0)}{p(z_0)} \right) \\
 &= \operatorname{Im} \left(-z_0 p'(z_0) \frac{1}{\beta} i \right) \\
 &= \frac{m}{2} \left(a_0 + \frac{\beta^2}{a_0} \right) \\
 &\leq \frac{n}{2} \left(a_0 + \frac{\beta^2}{a_0} \right) \frac{1}{\beta} \\
 &= \frac{n}{2} \left(\frac{a_0}{\beta} + \frac{\beta}{a_0} \right) \leq -n.
 \end{aligned}$$

This completes our proof. □

Putting $a_0 = 1$ in Theorem 1, we have Corollary 1.

Corollary 1. *Let $p(z) \in \mathcal{H}[1, n]$ and suppose that there exists a point $z_0 \in \mathbb{U}$ such that*

$$\operatorname{Re}(p(z)) > 0 \quad \text{for } |z| < |z_0|,$$

$\operatorname{Re}(p(z_0)) = 0$ and $p(z_0) \neq 0$.

Then we have

$$\frac{z_0 p'(z_0)}{p(z_0)} = il$$

where l is a real and $|l| \geq n$.
